STONHARD.COM

We have more than a century of experience solving customers' problems. We provide product recommendations, design support, project management and we take responsibility for both the products and the installation. This means you work with Stonhard directly from project start to completion.

STONHARD SEAMLESS FLOORS FOR SEMICONDUCTOR FACILITIES

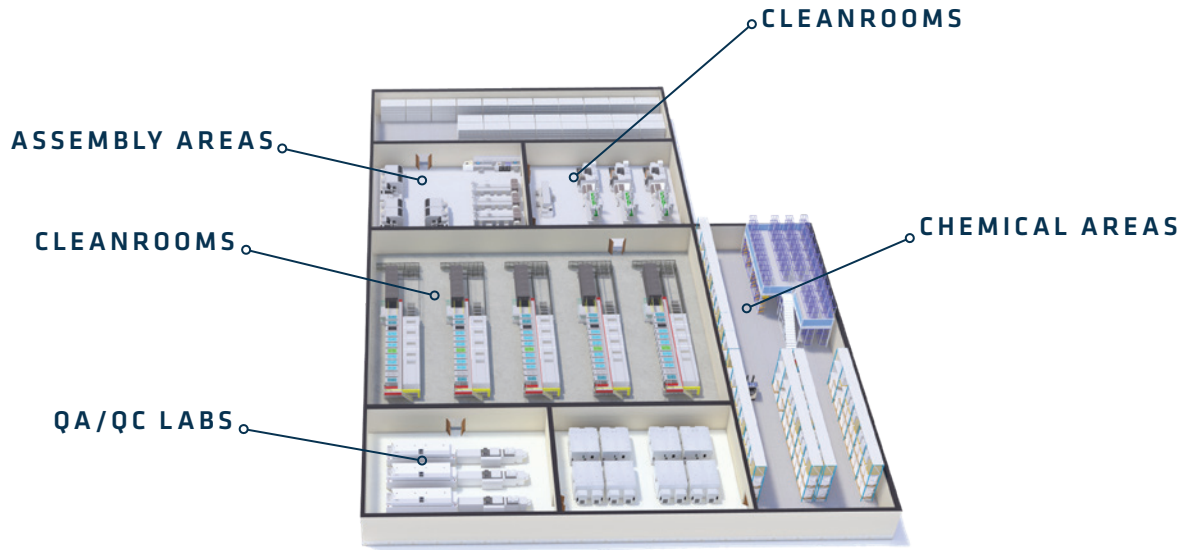

CONTAMINATION AND DOWNTIME,
WE HAVE SOLUTIONS FOR BOTH

Clean, safe, chemical-resistant floors are the leading option for semiconductor environments.

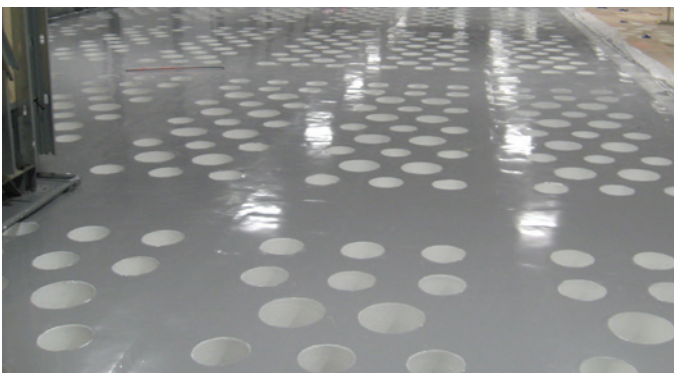

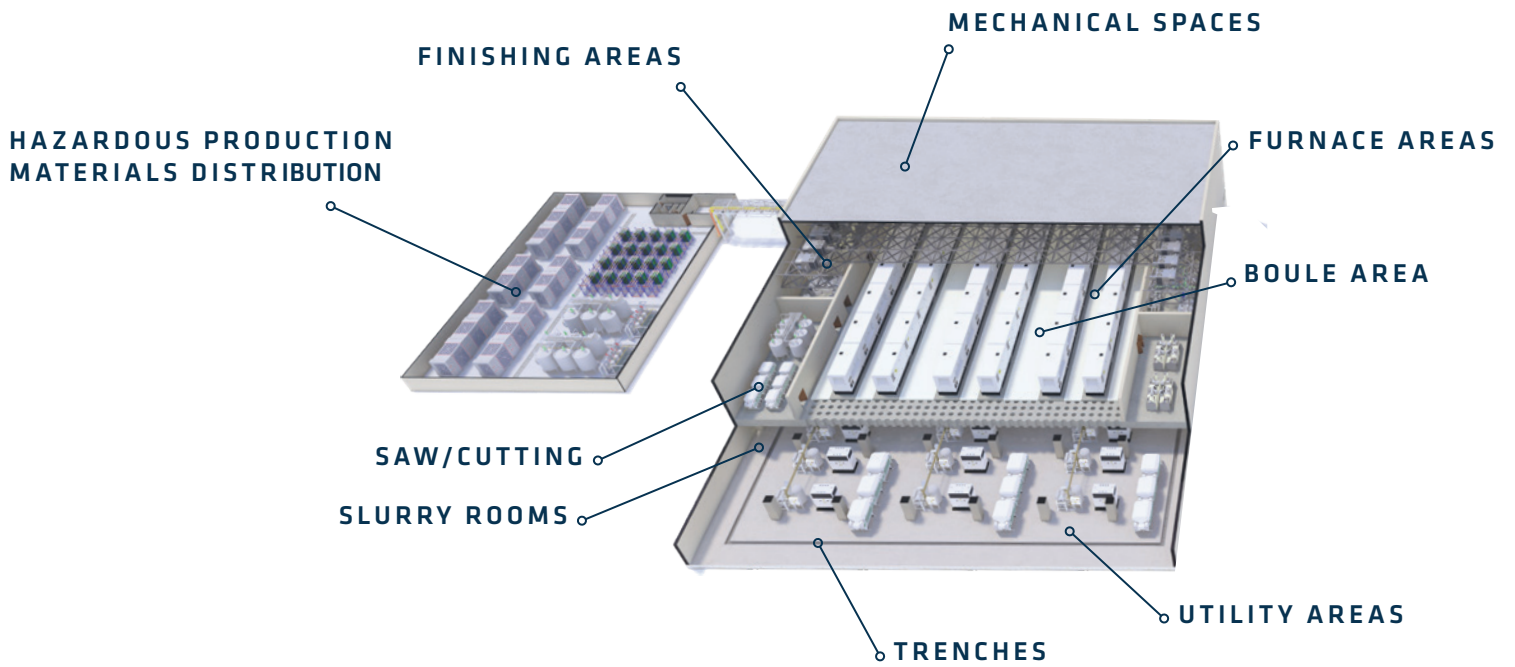

Our poured-in-place, sanitary floors are multi-layered systems designed to protect chip manufacturing environments against contamination with low VOCs and ultra-low AMCs. They are impact and abrasion resistant and most of all, chemical-resistant to stand up to chemical spills and stains and keep dust from compromising chips and wafers. And we don't stop there. We repeatedly test our products, as well as our competitors' products, so we know our floors outperform the rest.

Our products help minimize downtime. We get it right and install the right solution so you don't have to stop production due to problems or floor repairs. We work with your schedule to get the installation completed in a timely manner so there is no loss of valuable production time. And if you're building a new facility, we work with your timetable to get the job completed and meet your deadlines.
